PROFILE

Final-year software engineering student specializing in cloud infrastructure automation on Google Cloud Platform: Terraform-based infrastructure-as-code, policy-gated deployment pipelines, and Python services on Cloud Run. Seeking a 4–6 month end-of-study capstone internship (PFE) from January to June 2027; final coursework concludes in December 2026.

TECHNICAL SKILLS

Cloud & Infrastructure: Google Cloud Platform (Cloud Run, Cloud Build, Artifact Registry, Secret Manager, BigQuery, Cloud Storage, IAM), Terraform, Infrastructure as Code, Policy as Code, Docker, Linux
Backend & Languages: Python, FastAPI, Flask, REST APIs, SQL, YAML
Automation & CI/CD: GitHub Apps & Webhooks, Cloud Build pipelines, Git, GitHub, pytest, Postman
LLM Integration: Gemini API, Gemma 3 fine-tuning
Data & ML: pandas, NumPy, scikit-learn, TensorFlow/Keras
Security & Audit Tooling: Burp Suite, Nikto, Google Lighthouse, GTmetrix
Familiar: Java, Node.js, Next.js, React, MySQL

PROJECTS

GCP Infrastructure-as-Code Review Pipeline Personal project

github.com/sinex-cloud/infrastructure-terraform-gcp github.com/sinex-cloud/gcp-foundation-module
A GitHub App that reviews every Terraform pull request against a GCP project, then holds terraform apply behind a human approval label.

- Implemented seven deterministic policy-as-code checks in Python over Terraform JSON plan output, flagging over-permissive IAM roles and public storage buckets as high-severity findings.
- Designed a two-stage approval gate for terraform apply, combining automated policy checks with a human-applied approval label; the Gemini API only explains findings, it never decides.
- Eliminated credential exposure by keeping the GitHub App key and webhook secret out of Terraform state, running all plan/apply operations under an impersonated service account instead of a local key file.
- Provisioned BigQuery, Cloud Storage, and three IAM tiers from a single foundation.yaml across two git-tagged modules, and triggered Cloud Build directly via its API so every run uses the exact commit under review.

Stack: FastAPI on Cloud Run · Cloud Build · Secret Manager · Artifact Registry · Developer Connect · GCS remote backend with per-environment .tfbackend · pytest

Stock Prediction Pipeline (1H) University team project

github.com/sinex-cloud/stock-prediction-1h

- Engineered a feature set of lagged returns, rolling statistics, RSI, and ATR from hourly AAPL price data in pandas, feeding a Keras LSTM model trained using a chronological train/test split appropriate for time-series forecasting.
- Deployed the trained model and its fitted scalers behind a FastAPI prediction endpoint, with a Flask dashboard consuming the endpoint over HTTP to visualize predictions.

EXPERIENCE

MLOps Intern at PwC Tunisia, Tunis July 2025 – August 2025

- Collected, annotated, and cleaned a dataset of financial-news articles, then fine-tuned and prompt-engineered a Gemma 3 model for an MLOps team building a live financial-news research agent.

Security & Web Audit Intern at PREVENTIS, Sfax May 2024 – June 2024

- Conducted a security audit of the company's production website using Burp Suite and Nikto to identify vulnerabilities and misconfigurations.
- Profiled site load performance and SEO health using Google Lighthouse and GTmetrix, benchmarking results against best-practice thresholds.
- Delivered a technical findings report with prioritized recommendations that informed the company's planned website redesign.

Full-Stack Intern at Wimbee Beyond Expertise, Tunis June 2023 – July 2023

- Contributed to a Java/Spring Boot backend and Angular frontend, gaining hands-on exposure to MySQL and API testing with Postman.

EDUCATION

MedTech – Mediterranean Institute of Technology, South Mediterranean University, Tunis, Tunisia

Engineering Degree, Software Engineering, 2022–2027 (expected)

CERTIFICATIONS

Preparing for Google Cloud Certification: Cloud Engineer, Google Cloud (Coursera), Jul 2026
CCNA Foundations: Networking Basics and Cisco IOS Essentials, Packt (Coursera), Nov 2025
Agile Project Management, Google (Coursera), Apr 2025
Advanced SQL for Data Engineering, 365 Data Science, Nov 2024

LANGUAGES

English: Fluent · French: Intermediate · Arabic: Native
