

Ahmed Brini

Software Engineer — Cloud & DevOps

Tunis, Tunisia | +216 29 270 025 | ahmed.brini.abr@gmail.com | LinkedIn | GitHub | GitLab | Portfolio

Education

Mediterranean Institute of Technology (MedTech)

Tunis, Tunisia

Engineering Degree in Software Engineering, South Mediterranean University (SMU)

Sep. 2022 - Present

Relevant Coursework: Pervasive Computing & Cloud, Algorithms & Complexity, AI Engineering, Machine Learning

Projects

CI/CD Delivery Pipeline on GCP

Personal Project

gitlab.com/brinidev/gcp-delivery-pipeline

Sep. 2026 - Oct. 2026

- Automated delivery of a containerized FastAPI service to two GCP VMs, so every push to main is tested, published to Docker Hub and deployed in under two minutes, with a three-stage GitLab CI/CD pipeline
- Made deployments repeatable and safe to retry by writing idempotent Ansible roles that install Docker, run the exact image tagged with the commit SHA and confirm each release through a health check
- Provisioned the infrastructure as code with Terraform (two Compute Engine VMs and a tag-scoped firewall rule) and kept credentials out of the repository with protected GitLab CI/CD variables and a dedicated deploy SSH key

Technologies: GitLab CI/CD, Ansible, Terraform, Docker, Docker Hub, GCP (Compute Engine), FastAPI, Python

GCP Infrastructure Automation with Terraform

Personal Project

github.com/sinex-cloud/infrastructure-terraform-gcp

Jun. 2026 - Aug. 2026

- Let routine infrastructure changes (a new dataset, bucket or IAM permission) be made in a YAML file instead of Terraform code, by designing a modular foundation of reusable BigQuery, Cloud Storage and IAM components
- Made it possible to upgrade one part of the shared foundation without touching the rest, by versioning the module with Git tags and pinning each component to its own release in the consuming repository
- Automated Terraform plan review with policy checks by building a GitHub App that triggers a Cloud Run service on every pull request, runs checks through the Cloud Build API and requires human approval before any apply

Technologies: Terraform, GCP, Cloud Build, Cloud Run, GitHub Apps, Webhooks, BigQuery, IAM, Python, YAML

Internship Experience

Machine Learning Intern

Tunis, Tunisia

PwC Tunisia

Jul. 2025 - Aug. 2025

- Fine-tuned Gemma language models for finance question answering and built the pipelines covering dataset preparation, training, checkpoint management and model evaluation
- Compared candidate checkpoints across evaluation suites and tracked experiments with MLflow to support model selection

Technologies: Python, Gemma, MLflow, LLMs, MLOps

Software Engineering Intern

Tunis, Tunisia

Wimbee Beyond Expertise

Jun. 2024 - Jul. 2024

- Developed an end-to-end stock-price forecasting pipeline with an LSTM neural network, covering data preprocessing, financial and time-series feature engineering, training and evaluation
- Exposed the model through a FastAPI service and built a separate Flask dashboard showing price, RSI and volatility indicators with a live backtest (MAE, RMSE, directional accuracy)

Technologies: Python, TensorFlow, LSTM, FastAPI, Flask, Scikit-learn, Time-Series Analysis, REST APIs

Security & Web Audit Intern

Sfax, Tunisia

Preventis

May 2023 - Jun. 2023

- Assessed web application security with Burp Suite and Nikto and documented remediation recommendations
- Evaluated website performance and SEO with Google Lighthouse and GTmetrix and produced a structured audit report

Skills & Interests

Cloud & DevOps: GCP, Terraform, Ansible, GitLab CI/CD, Docker, Docker Hub, CI/CD, IaC, Policy as Code

Programming & Tools: Python, FastAPI, Flask, Git, Linux, GitHub Apps/Webhooks, REST APIs

Languages: English (Fluent), French (Intermediate), Arabic (Native) | **Interests:** Kickboxing K-1, Gym, Cars
