Cloud & DevOps-oriented Software Engineering Student | Seeking a 4-6 month capstone internship (PFE), available Jan. – Jun. 2027

Education

Mediterranean Institute of Technology (MedTech)

Tunis, Tunisia

Engineering Degree in Software Engineering, South Mediterranean University (SMU)

Sep. 2022 – Present

Relevant Coursework: Pervasive Computing & Cloud, Algorithms & Complexity, Cyber Security Assessment & Management, Software Quality & Testing, Deep Learning

Work Experience

Machine Learning Intern

Tunis, Tunisia

PwC Tunisia

Jul. 2025 – Aug. 2025

- Delivered a fine-tuned Gemma-3-1B finance Q&A model, improving held-out answer accuracy from roughly 40% to 78% by curating 50 finance Q&A pairs and running LoRA fine-tuning for 3 epochs
- Helped the MLOps team select a production model, reducing model-selection time from an estimated 2 weeks to 3 days by benchmarking 3 candidate checkpoints across 5 evaluation suites and logging results to MLflow
- Built 3 end-to-end LLM fine-tuning pipelines across 2 Gemma model sizes, taking each from raw JSONL data to a deployable checkpoint

Security & Web Audit Intern

Sfax, Tunisia

Preventis

May 2024 – Jun. 2024

- Delivered a prioritized security findings report, surfacing 12 vulnerabilities and misconfigurations including 3 high-severity findings by auditing the company's production website with Burp Suite and Nikto
- Helped inform the company's planned website redesign, identifying an estimated 35% potential improvement in page load time by profiling performance and SEO health with Google Lighthouse and GTmetrix against best-practice thresholds

Full-Stack Intern

Tunis, Tunisia

Wimbee Beyond Expertise

Jun. 2023 – Jul. 2023

- Delivered a working full-stack reference application, catching an estimated 4 integration bugs before merge by building a 5-endpoint Spring Boot REST API and testing every endpoint in Postman before Angular integration
- Helped the team validate its intended stack, reducing new-developer ramp-up time by roughly 30% by shipping a working Java/Spring Boot and Angular implementation with MySQL that served as a reference for later features

Personal Projects

GCP Infrastructure-as-Code Review Pipeline | Terraform, Python, GCP, FastAPI, GitHub Actions

Jun. 2026 – Present

- Delivered a policy-gated Terraform review pipeline, blocking IAM and security misconfigurations before merge by implementing 7 deterministic policy checks in Python covering broad IAM roles, public access, missing labels, naming conventions, and unapproved direct resources
- Helped make the pipeline safe to trust for automated PR review, verified by 41 unit tests passing across the policy engine and GitHub webhook service by writing tests alongside every script in the repository
- Learned to ship a production-shaped GCP system by writing 577 lines of Terraform across 2 versioned modules and roughly 1,300 lines of Python across policy checks, PR automation, and a FastAPI review service

Stock Prediction Pipeline (1H) | Python, TensorFlow, LSTM, FastAPI, Flask

Feb. 2026 – May 2026

- Delivered an end-to-end LSTM forecasting pipeline for next-hour AAPL price, reaching about 1.3% mean absolute percentage error on early test predictions by engineering 20 features from 419 hours of price data and training a 32-unit LSTM on a chronological 316/80 train/test split
- Delivered a servable model by wrapping the trained LSTM and its fitted scalers behind a FastAPI prediction endpoint, with a Flask dashboard structured to consume it over HTTP

Skills & Interests

Cloud & DevOps : GCP, Terraform, IaC, Policy as Code, Docker, CI/CD, GitHub Actions

Programming & Tools : Python, Git, Linux, GitHub Apps/Webhooks, FastAPI

Languages : Arabic (Native), English (Fluent), French (Intermediate), Turkish (Beginner)

Interests : Kickboxing K-1, Gym, Cars
